BUSINESS CHALLENGE

Application environments have become increasingly challenging to manage, mainly as they migrate into distributed, hybrid, or purely cloud-based environments.

RECOMMENDATION FOR ENTERPRISE ENVIRONMENTS

According to Gartner's Market Guide for Service Orchestration and Automation Platforms, around 80% of organizations worldwide will use Service Orchestration and Automation Platforms (SOAPs) to orchestrate workloads across IT and business domains by 2025. Based on this data, Infrastructure & Operations leaders are advised to invest in SOAPs to achieve customer-focused agility for their cloud, big data, and DevOps initiatives.

KEY FINDINGS FROM GARTNER

- Existing workload automation strategies face challenges coping with evolving complexities.
- Collaboration and automation gaps across business and IT teams hinder digital business progress.
- Cost optimization is a pressing challenge due to technical debt and the need to demonstrate business value.

OUR ALIGNMENT WITH GARTNER'S RECOMMENDATION

- IT-Conductor SOAP offers agility and efficiency, ensuring compliance with ISO 27001 standards.
- We provide democratized access to automated capabilities, fostering collaboration across teams.
- Our expanded service orchestration and event-driven workflows fuel innovation and support cost optimization efforts.

Comprehensive Service Orchestration

Advanced Automation

Intelligent Event Driven Workflows

Cost Optimization

Unified Monitoring & Visibility

Monitor, Manage, and Orchestrate Enterprise IT through Intelligent Automation

IT-Conductor is a patented, fully managed Software-as-a-Service service orchestration and automation platform designed to provide remote and agentless monitoring, performance management, and automation solutions to IT and business teams.

Our Solutions

Applications Performance Management

- Manage applications from a single pane of glass
- Orchestrate and automate complex IT and business processes across open platforms & apps.

Full-Stack SAP Monitoring, Management & Automation

- E2E management of your entire SAP landscape
- Self-healing Automated Recovery
- Simplify SAP Basis operations with automation

Infrastructure Monitoring & Observability Solution

- Manage end-to-end IT from a single platform
- Designed for complex and hybrid IT infrastructure
- Provides advanced observability features

Cloud Migration

- Move applications to the cloud, simpler & faster
- Size resources for peak performance & scalability
- Get your environment assessed today!

Workflow Orchestration

- Highly Customizable Built-In Process Composer
- Supports Multi-Platform Integration & Automation
- Advanced Low-Code Automation Platform

Unified Platform for Managed Services Providers

- Streamline management of customer applications
- Optimize administration of customer DBMS
- Enable advanced observability for customers

OUR STORY

IT-Conductor was officially founded in 2014 after over ten years of turning a big idea of automating IT into a practical solution. The big idea is to enable customers to "Stop Guessing and Start Managing" their enterprise IT application environment. It's all about the integrated ability to collect a vast amount of application and supporting infrastructure instrumentation data into standardized and time-synchronized intelligence that can be acted upon.
